

TURF MANAGEMENT TOPDRESSING

Perfect for Foot Ball Fields, Soccer Fields, Softball Fields, Baseball Fields and related High Traffic Grass Areas

All healthy turf has one thing in common: a good root system. To achieve a healthy turf with an optimum playing surface, it is often necessary to modify the soil profile. Compacted soils force roots to grow near the soil surface which diminishes its ability to recover from extended sports play. A less than ideal playing surface can leave athletes susceptible to injuries. Unhealthy turf is also more susceptible to disease, pests and weed invasion. An ideal soil profile will yield strong, healthy turf that requires less maintenance and less water.

Incorporating **Utelite Soil Conditioner** into the soil profile creates a strong, stable root-development zone with enhanced pore space for air, water and nutrients. The Soil Conditioner promotes deep, healthy root growth by providing adequate drainage, reducing nutrient loss, improving moisture retention and increasing resistance to compaction.

Kaysville Angel Field Soccer Complex

Benefits of Topdressing with Utelite Soil Conditioner

- Provides an optimum turf playing surface.
- Encourages healthy turf establishment with deep root systems.
- Provides proper drainage and aeration.
- Reduces compaction from repetitive use and play.
- Quickens recovery from active use and play.
- Prevents damage from use or play during inclement weather.
- Lessens down time after inclement weather.
- Encourages water conservation.
- Provides long lasting results.

Application

Spread a 1/8" to 3/8" uniform layer of the Soil Conditioner on to a closely mowed and recently aerated surface. Drag or broom the topdressed area to push the applied material into the empty cores and then adequately water the treated area.
