

## Logan City Uses ACT-MX at Landfill for water treatment of nearby

Psomas Engineering and Logan City teamed up with ES Filter to clean the waters of a near by stream. ACT-MX was the choice of media because of its simplistic design, low maintenance and light weight. As the water runs parallel to the landfill, it was piped to avoid contamination. Prior to it entering the pipe, the water runs through the ACT-MX media to clean the water.

ENGINEER: Psomas Engineering

CONTRACTOR: Wardell Brothers

Testimonial from Key contact: Logan City Landfill Manager John Christianson, “We liked the simplicity and the ease of installation as well as the low maintenance. We plan to use this media in other projects at the landfill because of its application to our site.” John Christianson

ACT-MX Changing the way you think about water treatment.
